

DESCRIPTION

AGROMAX 720WP is a protective and curative fungicide for the control of early and late blight of potatoes and tomatoes.

MODE OF ACTION

AGROMAX 720WP has residual and curative properties. The active ingredient cymoxanil penetrates into the plant tissue rapidly and when inside, it cannot be washed off by rain. It has ability to stop development of late blight up to three (3) days after infection.

Mancozeb is a protective residual fungicide that provides a protective film over the plant surface thereby inhibiting new infections.

DIRECTION FOR USE**Application Rate**

Crop	Disease	Application rate
Potatoes	Early and late blight	2.0 Kg/Ha (40 g/ 20 L)
Tomatoes		

Re-Entry Period: 6 hours.

Pre-Harvest Interval

Potatoes: 14 days

Tomatoes: 3 days

Application Timing

Start spray treatments of AGROMAX 720WP when disease conditions appears or during cool humid weather condition at 5 – 7 days interval. Use AGROMAX 720WP for protective purpose when disease prevalence is low at 10 – 14 days interval.

Preparation of Spray Mixture

Half fill the knapsack sprayer with water. Mix the required amount of AGROMAX 720WP with little water and pour into knapsack sprayer. Fill the knapsack sprayer with water and stir to uniformity.

Application Technique

Apply as a high volume spray using 800 – 1,500 L per Ha depending on crop size to ensure thorough coverage and wetting of the crop.

Disease Resistance

Cymoxanil is only moderately prone to fungi developing resistant. Since AGROMAX 720WP is a combination of two different mode of action, it may be used repeatedly without any danger of development of disease resistance.
